

## **Red Tac Gear**

Over the last year we have been using a handful of great products from Red Tac gear. These products have made a huge difference in our ability to quickly access and store our gear while we are shooting in a variety of tactical matches. The Red Tac line of gear has been nothing less than superb. The quality of work and durability has been flawless and rugged. The gear comes in olive drab, tan, black and a variety of popular camouflage patterns. We highly recommend that you take a look and use the products from Red Tac gear.

**Rear bag-** The first piece of gear I had ever used was the rear bag. After many years of making my own rear bags of various materials and fillings, I haven't been able to find any other bag that was made exactly how I wanted it and that has lasted as long as the Red Tac bag. My current bag has been used more than any of the bags I have made and it still looks like it's brand new. The redman bag can be hooked over the front of your bipod legs as well and used as a front rest if need be. The size of the rear bag is ideal for the operational sniper; it is not made overly large like a lot of bags that are being sold. The size of this bag allows you to hook it to your vest, tuck it in a pocket or place it in a pouch on your gear where others are just too large to do any of the above.

**Tactical Bible Case-** The TBC'S are made for Red Tac by ESSTAC to Stu's specs. At first glance you may think that the TBC is just like the rest of the data book covers out there. When you open it up you will soon be surprised to see that this isn't any ordinary data book cover. The TBC has multiple pockets on both sides of the case to allow you to place a variety of sniper related tools that need to be taken to the field. No need to worry where your calculator, pad of paper, pens, pencils, stencils and mildot master because they can easily be placed inside your TBC so they are readily accessible. On the front of the TBC you will find a piece of Velcro so that you can attach a name tape or unit patch to personalize it.

**Ammo Cards-** One of my most favorite pieces of gear. I can't tell you how many times I have needed a product like this or been asked by operational snipers where do you put all your ammo. The days of lugging around cardboard boxes which are not easily accessible and get wet and ripped up are over. These data cards come in a variety of sizes. I currently use the 20 round cards and find that they allow me to carry the right amount of ammo with as little cards as possible. The ammo cards can be bought in 8 or 10 round configurations as well. The cards can also be made with Velcro on the back of them so that you can place them on your weapon or on your tactical vest for easy access. These cards can be hung from a belt, hooked on your vest or a pack and placed inside a variety of pouches. They can be easily removed from a pouch by the para cord loops that are on them. The ammo cards when empty can be easily stowed away in a pocket, pack or pouch or simply hung by a D-ring from anywhere you would like.

**GP Laser Range Finder Case-** These cases are made for Red Tac by ESSTAC to Stu's specs. The case's can be attached to any molle type system or vest or you can feed it onto a belt and wear it on your hip. The case has an easy to close velcro closure and a quick release snap to completely lock your LRF in place. These covers are not a padded case and are simply a general purpose pouch to carry your L.R.F rather than putting them in your ruck.

**GP Kestrel Pouch-** These cases are made for Red Tac by ESSTAC to Stu's specs. The Kestrel pouch once again can be easily attached to any molle type system or vest or you can feed it onto a belt and wear it on your hip. The case has an easy to close velcro closure and a quick release snap to completely lock your wind meter in place. These covers are not a padded case and are simply a general purpose pouch to carry your Kestrel rather than putting them in your ruck.

If you have a need for a specific piece of gear Red Tac gear can take that idea and help you make that idea into reality and get you that piece of gear to help accomplish your mission.
